

Shaping light
providing solutions

Solution

In collaboration with our customers, we bring ideas to life through a co-creative development process, blending cutting-edge technology with deep industry expertise to craft solutions that push the boundaries of lighting innovation.

Service

Beyond our products, we offer a wide range of services to support your lighting projects

- Co-development of sustainable solutions
- Light laboratory for testing and documentation
- Light simulations
- CAD/CAM services
- Kitting solutions, ready for your production line
- Logistics support
- A global partner network
- Advanced technical expertise
- CO2 calculator

Our production capabilities include:

- 3D printing
- Roll-slitting
- CNC milling (3/5 axis)
- CNC knife cutting
- Laser cutting and engraving
- Laminating
- Thermoforming

With these offerings, we deliver comprehensive, tailored solutions to meet every need.

About us

We are a leading manufacturer of innovative and sustainable optical lighting solutions, components, and services for the global lighting industry.

Through customized designs, high-quality production, and expert craftsmanship, we shape light to deliver exceptional performance that meets and exceeds industry standards.

Product range

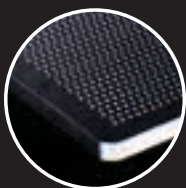

Our extensive portfolio ensures the right solution to match your requirements for functionality, efficiency, quality, and cost. We source raw materials from leading global producers and maintain local stock for fast and efficient delivery.

- Microprisms
- Light Guide Plates
- LED Diffusor Sheets
- LED Diffusor Films
- LED Reflectors
- Suspension Solutions

With a commitment to quality and innovation, we provide the components you need for optimal lighting performance.

Light Guide Solutions

We offer a wide range of advanced light guide solutions powered by cutting-edge laser technology. This enables flexibility in order sizes and product customization, at no extra costs. Our optical engineering team designs and develops customized structures, which are tested and documented in our light laboratory to ensure top performance.

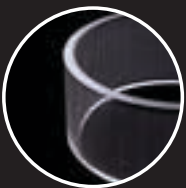

LGP - Light Guide Plates

Very slim solutions with excellent light efficiency.

LGB – Light Guide Bends

Customer-specific parts created through thermoforming processes.

LGT – Light Guide Tubes

Unique edge lit tube solution in up to 1000mm lengths.

LGR – Light Guide Rods

Solid rods, light-induced from one or both ends, for uniform, aesthetic illumination.

Light laboratory service

As experts in light measurements, we offer a service designed to ensure high-quality products and support your R&D efforts. Using state-of-the-art inspection software, we provide valuable insights that enhance your production process. Our advanced 2-axis goniometer, equipped with precise sensors, allows us to measure your luminaire effectively and provide a comprehensive 3D distribution field.

Our services include:

- Lumen/Watt
- UGR value
- Peak Candela
- CRI + TM30
- CIE
- Beam Angle
- Angular Field Distribution
- Power & Power Factor
- And much more!
